

news:

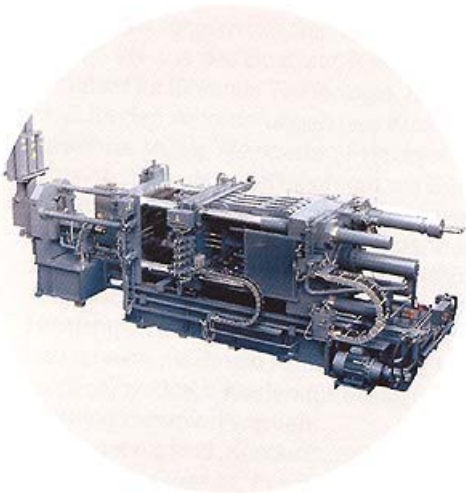

The investment plan 2006/2007 was discharged, to be able to manufacture diecasting dies up to a total weight of 40 tons to middle 2006.

In order to guarantee and still extend the complete service familiar of “Modell Technik”, a diecasting machine of the brand “Mueller Weingarten” with 2,300 tons of locking force was ordered, the already existing two machines in our foundry laboratory.

We assume, it is a very important straight in this big diecasting die segment, not only to be able to manufacture the tool but also to sample and optimize it in the own shop to rest capacities of the customer and to preserve as well tools are suitable for serial production.

This aspect does not only save time and money – as well it offers an enormous competition advantage.

DGM MW 2300

locking force: 2,300 tons

Horizontal 5-axial gun drilling and millingcentre

traverse path
x: 4.000 mm
y: 2.000 mm
z: 1.200 mm

turntable: 2.500 x 2.500 mm
load capacity :30 tons

We will report again extensively to this theme in a short time.
